Sports betting is growing more popular every single year.

Units are what help bettors to compare winning and losses, regardless of the amount of money that is being wagered.

Essentially, it's a way to determine a bettor's skill.

Units help to really show the success that bettors are having in as honest of a way as possible.

No problem! A betting unit is simply the amount of money being wagered compared to an entire bankroll.

This is where odds come into play.
